

A person in a light blue shirt and dark pants is operating a floor buffer on a blue carpeted floor. The room has large windows on the right side, letting in bright light. The floor buffer is a large, circular machine with a yellow and blue body and a white pad. The person is walking from left to right, pushing the machine.

nora[®] pads

**Three cleaning pads.
Some water.
That is the nora system.**

nora[®]

All About Flooring. **All About You.**

The cleaning system for economically and ecologically preserving the value of nora® rubber floor coverings.

nora® pads are floor cleaning disks that are impregnated with countless, microscopically small diamonds. The flooring is mechanically cleaned and polished – just with water and absolutely no chemicals at all. nora® pads are suitable for day-to-day care as well as for repairing extremely soiled or damaged floorings. They can be used with most standard types of machine and are available in different sizes. nora® pads were exclusively developed for nora® rubber floor coverings.

Apply water

Clean the flooring with nora® pads

A clean result

The unique advantages of nora® pads and how you benefit from them:

nora® pads only require water to clean the flooring: no chemicals, wax or polish.

nora® pads are specially designed for nora® floorings and are suitable for cleaning, finishing and repairing them.

Ecological and economic cleaning; the usual day-to-day cleaning procedure stays the same.

Preservation or enhancement of your investment throughout its entire life cycle.

No more costs for cleaning agents.

nora® pads assure the sustained preservation of the value of nora® premium rubber floorings in an economic and ecological manner.

Three different pads. Three different areas of application.

Pad 1 is used for initial and regular cleaning, as well as for finishing previously cleaned or newly laid floorings in a single operation. This creates an impressive, prolonged bright sheen effect, whereby the intensity of the sheen can be determined by the user.

Pad 2 is suitable for post-installation, interim and intensive cleaning, laying the foundation for daily use with Pad 1.

Pad 3 removes coarse dirt as well as scratches, and performs impressively in repairing floorings, particularly where satisfactory results can no longer be achieved using conventional cleaning procedures.

nora® pads can only be used for nora® floor coverings. They are not suitable for other resilient or coated floorings.

Perfectly equipped for every application: nora® pads in 3 grades and 4 different sizes

Cleaning. From daily care through to intensive cleaning

Finishing. First clean the floorings and polish them to a bright sheen

Repairing. Removal of stubborn dirt and scratches
